

THINK-TANK IN OTOLARYNGOLOGY

Innovations and pearls

Module 5: Management of Tinnitus

Speaker

Dr. Neil Bailie

Otologist and Neurotologist, Toronto General Hospital
Assistant Professor of Otolaryngology –Head and Neck Surgery,
University of Toronto

Dr. Bailie graduated in 1994 at The Queen's University of Belfast with an intercalated BSc in Pathology. After initial training in surgery, Dr Bailie entered Otolaryngology training in 1998. He combined his Otolaryngology training with PhD studies into computer modelling of nasal airflow at the School of Aeronautical Engineering. His PhD work resulted in several breakthroughs in the field of nasal airflow modelling, including developing a method that reduced airflow predictions from taking 3 months to 1 day and a new understanding of the predilection of epistaxis to Little's area. However, despite a research interest in rhinology, Dr Bailie had become increasingly drawn to otology during clinical training. Following completion of the intercollegiate FRCS(ORL-HNS) exam in 2006, Dr Bailie was awarded the TWJ fellowship in otology and neurotology and came to UHN to work with Dr Rutka from August 2006 –August 2007. He continued to work with Dr Rutka as a fellow until October 2009, when he returned to the UK to take up independent practice specializing in otology and neurotology at the Royal Victoria Hospital, Belfast, in a post previously held by Gordon Smyth. Dr. Bailie returned to Toronto to take up his current post as a staff otolaryngologist with a specialist practice in otology and neurotology in September 2021. Dr. Bailie has considerable practice expertise in hearing restoration surgery and in the management of both tinnitus and vestibular disorders.
